Features

- **New Tab Override** — Opens as your default new tab page for frictionless study access
- **Popup Quick Access** — Click the extension icon for a quick stats summary and navigation
- **Multi-Format Import** — Import flash cards from JSON, CSV, or plain-text files
- **Duplicate Detection and Merge** — Intelligent deduplication with attribution tracking across contributors
- **3D Flip Cards** — Beautiful CSS 3D card flip animation for classic study mode
- **Scenario-Based Cards** — Long-form "Think Like a Manager" scenarios with detailed rationale

- **Spaced Repetition (SM-2)** — Industry-standard algorithm for optimized review scheduling
- **Progress Dashboard** — Domain mastery charts, streak tracking, weak area identification
- **Cross-Reference Links** — Clickable related card tags that jump to linked cards
- **Export Engine** — Export decks in JSON, CSV, or plain-text with optional progress data
- **Deck Manager** — View, manage, and delete imported decks with contributor tracking
- **Dark and Light Theme** — Toggle between cybersecurity-themed dark mode and clean light mode
- **Fully Offline** — Zero external dependencies, no network requests, all data stored locally in IndexedDB
- **Keyboard Shortcuts** — Full keyboard navigation for efficient study sessions
- **Responsive Design** — Works on various screen sizes

Screenshots

> Open a new tab after installation to see the StudyDeck interface. The extension features a cybersecurity-themed dark mode with electric blue accents and a clean light mode alternative.

CISSP Domains Covered

Domain	Name
1	Security and Risk Management
2	Asset Security
3	Security Architecture and Engineering
4	Communication and Network Security
5	Identity and Access Management (IAM)
6	Security Assessment and Testing
7	Security Operations
8	Software Development Security

Installation

Sideloading (Recommended for Study Groups)

1. Download or clone this repository to a local folder
2. Open Microsoft Edge and navigate to `edge://extensions/`
3. Enable **Developer mode** using the toggle in the bottom-left corner
4. Click **Load unpacked**
5. Select the `cissp-studydeck` project folder
6. The extension icon will appear in your toolbar and new tabs will load StudyDeck

Updating

1. Make changes to the extension files
2. Go to `edge://extensions/`
3. Click the **Reload** button (circular arrow) on the CISSP StudyDeck card

---

Getting Started

Step 1 — Import the Starter Deck

1. Open a new tab (StudyDeck loads automatically)
2. Click **Import** in the navigation bar
3. Click the drop zone or drag and drop the file `data/cissp-starter-deck.json`
4. Review the import preview showing 40 cards across all 8 domains
5. Click **Confirm Import**

Step 2 — Start Studying

1. Click **Study** in the navigation bar
2. Optionally filter by domain, card type, or review status
3. Click **Start Session**
4. Click the card or press **Space** to flip
5. Rate yourself: **Know It** (1), **Unsure** (2), or **Don't Know** (3)
6. Review your session summary when complete

Step 3 — Track Your Progress

1. Click **Dashboard** to view your progress
2. Monitor domain mastery, study streaks, and weak areas
3. Cards marked "Don't Know" will surface more frequently via spaced repetition

---

File Format Specifications

JSON Format

The simplest format for creating and sharing decks. Each card is an object in a JSON array.

```
[
{
"term": "Business Continuity Plan (BCP)",
"domain": "Security and Risk Management",
"type": "definition",
"answer": "A plan to ensure critical business functions continue during and after a disaster.",
"examTip": "Choose BCP over technical fixes for organizational resilience.",
"relatedCards": ["Disaster Recovery Plan (DRP)", "RTO", "RPO", "BIA"],
"tags": ["governance", "planning", "resilience"],
"contributor": "Alice"
}
]
```

CSV Format

```
term,domain,type,answer,examTip,relatedCards,contributor
"Business Continuity Plan","Security and Risk Management","definition","A plan to ensure...","Choose BCP over...","DRP;RTO;RPO;BIA","Alice"
```

Plain-Text Format

Human-readable format using labeled fields. Cards are separated by a line containing only ---.

```
TERM: Business Continuity Plan
DOMAIN: Security and Risk Management
TYPE: definition
ANSWER: A plan to ensure critical business functions continue during and after a disaster.
TIP: Choose BCP over technical fixes for organizational resilience.
RELATED: Disaster Recovery Plan; RTO; RPO; BIA
TAGS: governance; planning; resilience
CONTRIBUTOR: Alice

TERM: Risk Assessment
DOMAIN: Security and Risk Management
TYPE: definition
ANSWER: The process of identifying, analyzing, and evaluating risks.
TIP: Know the difference between qualitative and quantitative methods.
CONTRIBUTOR: Bob
```

Keyboard Shortcuts

Key Action
Space Flip card
1 Know It (green)
2 Unsure (yellow)
3 Don't Know (red)
→ (Right Arrow) Flip card, or if flipped, assess as Unsure and advance

Data Schema

Card Object

id UUID v4 — unique identifier
term String — the term, concept, or question
domain String — one of the 8 CISSP domains
type String — "definition" or "scenario"

primaryAnswer
text String — main definition or answer
contributor String — author name
sourceDeck String — deck file name
importedAt ISO 8601 timestamp

alsoSee Array of alternate/supplementary answers
text String — alternate answer text
contributor String — author name
sourceDeck String — source deck name
importedAt ISO 8601 timestamp

examTip String — exam-specific guidance
scenarioText String — long-form scenario (scenario-type only)
relatedCards Array of term strings — cross-referenced cards
tags Array of strings — custom tags for filtering
flagged Boolean — true if marked "Needs Review"

sm2
interval Integer — days until next review

easeFactor Float — SM-2 ease factor (default 2.5)
repetitions Integer — successful consecutive reviews
nextReviewDate Date string (YYYY-MM-DD)

selfAssessment String — "know", "unsure", or "dontknow"
reviewHistory Array of review event objects
timestamp ISO 8601 timestamp
quality String — assessment result
date Date string (YYYY-MM-DD)

Contributing

Adding Cards

1. Create a new JSON, CSV, or plain-text file following the format specifications above
2. Ensure each card has at minimum a term field
3. Use the canonical CISSP domain names listed in the domains table
4. Set type to "scenario" for scenario cards and include a scenarioText field
5. Add examTip to provide exam-specific guidance
6. Use relatedCards to create cross-references between related concepts
7. Add tags for custom filtering beyond domains
8. Include your name as contributor for attribution tracking

Study Group Workflow

1. Each member creates their own deck files covering their assigned domains
2. Members share deck files via email, Slack, or shared drive
3. Each member imports all shared decks — the merge engine handles duplicates
4. Different perspectives on the same term are preserved as "Also See" entries
5. Conflicting information is automatically flagged for group review
6. Full attribution tracking shows who contributed each answer

Code Contributions

1. Fork the repository
2. Create a feature branch
3. Make your changes
4. Test by sideloading in Edge (edge://extensions/ → Load unpacked)
5. Submit a pull request
